Curio

A homework coach for Grades 6–8 that rewards effort and never gives the answer.

Students | Teachers | Families

Rucha · Usha · Shrey

Meet Maya, 12

Maya · Grade 7

Brampton, Ontario

sound familiar?

7:40 pm
Stuck on question 4

7:42 pm
A chatbot hands her the answer

Next day
Can't do the quiz on her own

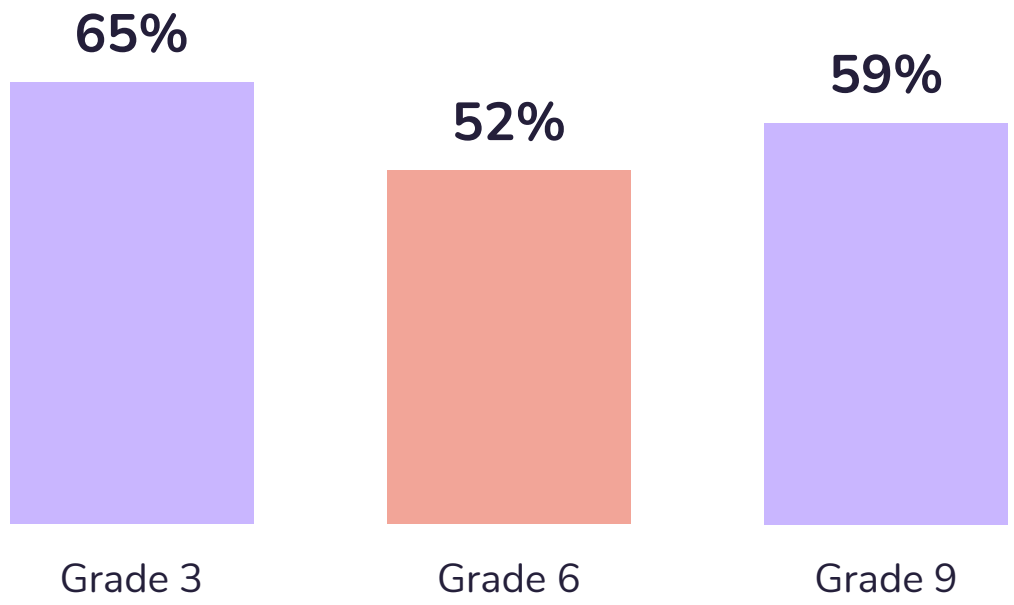

Weeks later
Parents see the grade, too late

Maya is an illustrative persona, not a real student.

Grade 6 is where math slips

Students meeting Ontario's math standard

EQAO, 2025–26

54%

of teens use AI chatbots for schoolwork

−17%

on exams when AI gave the answers

Sources: EQAO 2025–26 results; Pew Research Center, Feb 2026; Bastani et al., PNAS 2025.

Everyone feels it, no one sees it all

Students

Stuck, with nobody to ask

54%

use AI chatbots for schoolwork

Teachers

Can't see who's done what

73%

work 45+ hours a week

Families

Find out from the report card

27%

fewer failures with weekly alerts

Sources: Pew Research Center, 2026; Canadian Teachers' Federation, 2024; Bergman & Chan, randomized trial.

Curio: a coach, not an answer machine

Let's spot the key words first!

Coach, not cheat

Hints step by step, never the answer

Effort-first rewards

Stars for trying, fixing mistakes and improving

One loop, three audiences

Teachers and families see progress live

Why now: half of teens already use AI for homework, and a coaching turn now costs under a tenth of a cent.

Sources: Pew Research Center, 2026; Claude Haiku 5.5 API pricing.

How it works: hints, never answers

Math · Fractions

Question 4 of 10

What is ¾ of 24?

16	18
20	~~6~~

Teacher's hint
Find ¼ of 24 first.

The hint ladder

1. Spot the key words
2. Show the teacher's hint
3. Give a bigger nudge

The answer is never shown.

Works today

- 3 connected sites
- 6 question types
- 37 tests passing
- Works offline

Prototype today: data is stored in the browser and the class is a demo. The question screen is illustrative.

Schools pay, families never do

Classroom

$0

1 teacher, up to 30 students

School

Most popular

$5

per student a year, with a 2-month free trial

Campus

Custom

for districts and school groups

≈US$0.30

AI cost per student a year (est.)

0.03%

of Ontario's per-student funding

3× lower

than Khanmigo's district price

Prices are proposals to test in the pilot. Sources: Claude API pricing; Ontario Education Facts 2024–25; Khan Academy.

$6M in Canada, starting with the GTA

TAM · Canada

$6.0M / year

~1.2M students in Grades 6–8 × $5

SAM · Ontario

$2.26M / year

451,507 students × $5

SOM · GTA

≈$100K ARR by 2029

10% of 202,450 students × $5

45%

of Ontario's Grade 6–8 students are in the GTA

17.6%

yearly growth of AI in education in Canada

Our edge is the combination

What students and schools need	Curio	AI chatbots	AI tutors	Practice games	TVO Mathify
Coaches, never gives the answer	Yes	No	Yes	Partly	Yes
Rewards effort, forgives missed days	Yes	No	Partly	Partly	No
Teacher and family share live data	Yes	No	Partly	Partly	No
Instant help in every subject	Yes	Yes	Yes	Partly	Math only
Still works if AI is blocked	Yes	No	No	Yes	Yes

Our moat: effort-first scoring and a hint ladder enforced in code, in one loop for teachers and families.

Our assessment by category. Sources: TVO Learn Mathify; Khan Academy.

Teachers first, then schools, then boards

1 · LAND

Teachers try it free

Free plan for GTA teachers

2027: 3 pilot classes

2 · EXPAND

Schools convert

2-month trial, then $5 a student

2027–28: 10 schools

3 · SCALE

Boards buy at scale

Pass vetting, list on OECM

2028–29: first board

First channel

3 pilot classes in GTA schools, Feb 2027

Relationship

Weekly family digest, a buddy kids love
